

Mine Permitting, Operations & Reclamation

PLANNING SERVICES

Whether your company is extending or modifying existing entitlements, or developing a new mining project, it is imperative to work with a knowledgeable ally with expertise in mineral resource development. With extensive experience in mining development, EnviroMINE can bring your plans to life and work as an extension of your staff to ensure that your project is properly represented in the permitting process.

Mine Permitting

Mine permitting requires experience with government regulations, agency permitting processes, project team management and mining operations. This knowledge is necessary to meet government requirements while also ensuring that the mine operator does not face unreasonable conditions for permit approval.

EnviroMINE has substantial experience preparing and processing mine permit applications. Depending on the client's needs, the firm's role in the permitting process may extend to:

- Developing mining and reclamation plans that meet the requirements of government regulations, while also reducing agency interference in daily operations.
- Managing all facets of the permitting process. Develop budgets and schedules and track expenses throughout the process.
- Pulling together the necessary team of professionals to ensure that the project is adequately represented in the environmental review process.
- Working closely with lead agency staff to facilitate the permit processing.
- Working as the client's advocate to ensure that harmful and unnecessary permit conditions are eliminated.
- Being responsive to client needs throughout the process as if they are the firm's only client.

Mine Operation Planning

Mine planning requires a critical understanding of market conditions, site characteristics, equipment capabilities, mining methods and operational economics. The firm's direct experience with mining operations can be used to improve resource recovery, reduce costs and improve efficiencies.

EnviroMINE has acquired the skills necessary to design mining operations. The firm's professionals have experience with:

- Engineering analysis of a variety of mine operating scenarios.
- Matching equipment to job requirements.
- Front line supervision of equipment and blasting operations.

Reclamation Planning

Effective reclamation planning requires a thorough comprehension of the mining process and the ability to take advantage of site opportunities in the development of the post-mining land use plan.

EnviroMINE's reclamation plans are developed to meet legal requirements, maintain consistency with surrounding uses, and/or provide for a continuing source of profit after mining is complete. The firm has extensive experience with the preparation of reclamation plans and has hands-on experience with the actual reclamation process.

Environmental & Mine Permitting Services

Testimonial

“Turvey’s Granite Pit recently gained approval of a Major Use Permit and Reclamation Plan for their pit in Alpine, California. We could not have done it without them [EnviroMINE]. Mr. Coalson and his great staff were on the job, diligent and always aggressive in keeping the project moving.”

- Mark Turvey, Turvey’s Granite Pit

About EnviroMINE, Inc.

EnviroMINE, Inc. has provided specialized consulting services for the mineral resources industry for over 20 years. The firm's core services include: surface mine and reclamation planning, regulatory compliance support, and construction aggregate market studies and economic analysis. EnviroMINE also conducts mineral royalty rate surveys and assists with royalty negotiations between land owners and operators.

The firm understands that clients expect prompt attention to their concerns. In this effort, the EnviroMINE staff has been trained on the importance of attending to every need as quickly as possible. While the staff is well versed in the technical mandates of mining operations and permitting requirements, they stand above the competition because of their willingness to serve clients.

Contact EnviroMINE for your next mine permitting and planning project.
